

# PRESERVANT

Care Navigation | Healthcare Informatics

## Our Vision

### Next Generation Healthcare

Our innovative SpecNav care navigation solutions present the opportunity to help move our healthcare system to one that values prevention, over treatment, and focuses on, first, preventing disease. Then, on achieving better health outcomes, helping patients live successfully (mobile and independent) at home, helping manage and improve chronic diseases, and fostering a more efficient and coordinated health care system.

Given the increased shift in care dynamics toward the virtual/telehealth service delivery model, we have expanded our innovative SpecNav care navigation services to provide those services both in-person and virtually (remotely). We help patients and caregivers prepare for at-home and in-person virtual care visits with the providers, as well as join them on their visits/calls as participants. These services are branded as SpecTele telehealth services and will be offered and provided, primarily, via our website's ecommerce platform.

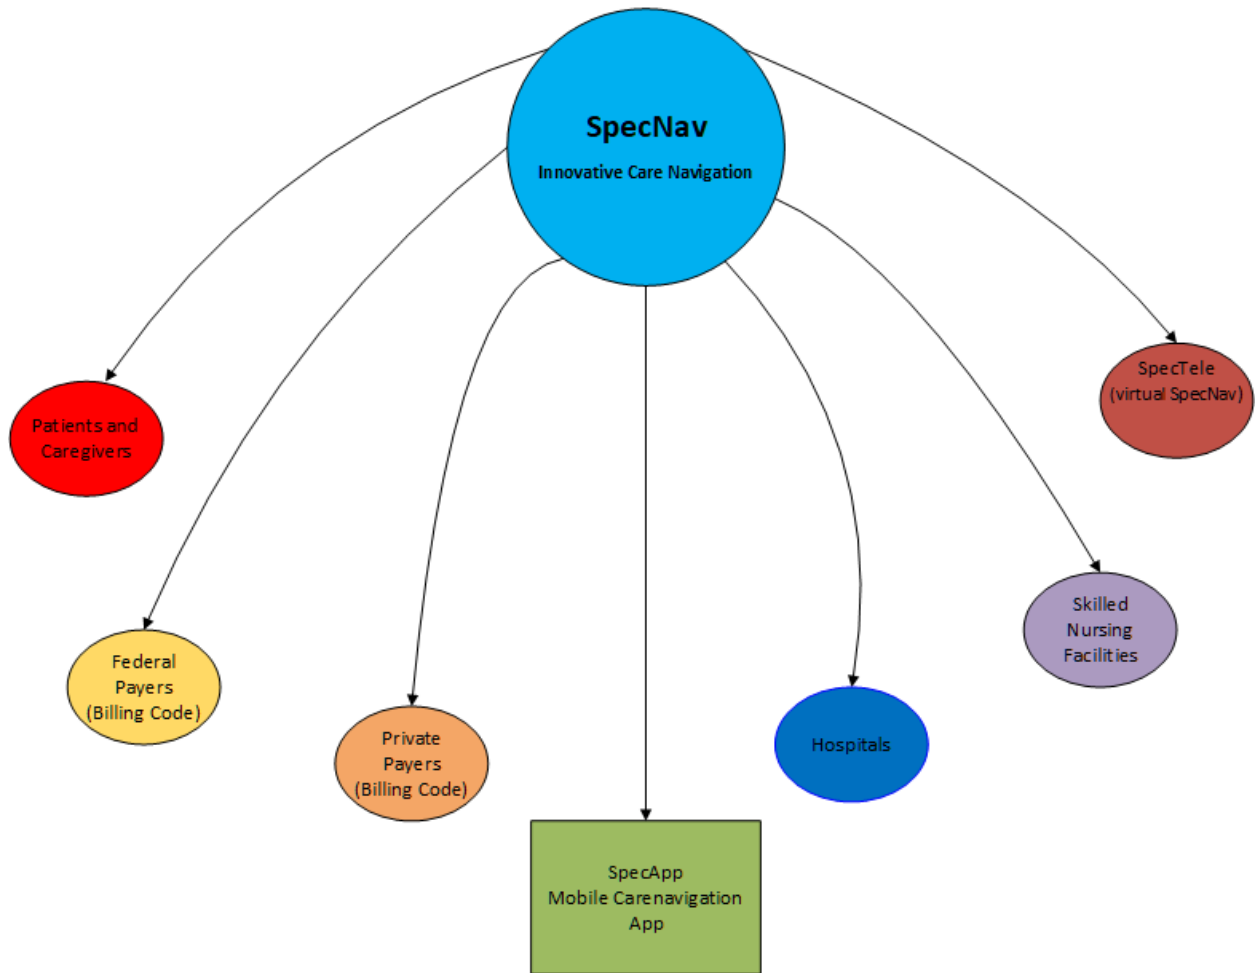

***The virtual and in-person delivery of personal care + clinical care + Preservant's innovative SpecNav care navigation solutions = Whole Care***

There are ongoing efforts to obtain a billing code for our SpecNav care navigation services and have those services classified as “covered benefits” by private and federal healthcare payers. In that pursuit, the care navigation services have been highly vetted by federal and private healthcare entities which include the CDC, CMS, VHA, NC Medicaid and leaders at various major healthcare systems (hospitals).

In partnership with mid-large size organizations, we will finalize the development of our SpecApp mobile app which focuses on empowering and protecting patients by providing the skills and knowledge required for patients to become effective partners in their own care. SpecApp, will enable medical patients to effectively self-manage their care and to prepare for their engagements with providers in the privacy of their own homes.

# SpecNav's Total Vision

Pioneering On The Frontline of  
Health Risk Prevention

A direct sales strategy is employed for our informatics (workflow and process optimization) services. We are currently exploring potential opportunities to provide

informatics consultation in a virtual manner. This will include an invitation to healthcare organizations to outsource their workflows and processes optimization/enhancement projects to us.
