

## You Are Not Left Alone, At That Point

We provide the following assistance with your information technology:

1. Assist practice personnel with identification of best-suited EMR/EHR solutions by helping practice personnel to ask the right questions and evaluate the answers they receive.
2. Supporting the coordination of EMR/EHR/PM installation and implementation
3. Ensure efficient implementation of an improved workflow and information model, during implementation
4. Identification of opportunities to leverage investments in the technology solutions

Should your healthcare organization experience dissatisfaction with an existing EMR/EHR /PM solution, we determine the cause and, if necessary, identify the most efficient and cost-effective solution/vendor replacement.

Health care organizations must continue to monitor the EHR-driven workflows and adjust the workflows to maintain optimal efficiency.
